WMIX® 94
AM & FM RADIO

March 22, 1990

Dear Bill,

This letter is to confirm your reception of WMIX on January 3, 1990 at 3a.m. WMIX generates a 1500 watt directional nighttime signal with an east/west bearing. We have a 5000 watt daytime signal with a northwest/southeast pattern.

WMIX operates 24 houss a day and is affiliated with the Mutual Broadcasting System. Our studios are at 3501 broadway in Mt. Vernon; our transmitter site is located 3½ miles north of town on Illinois route 37.
Our power increase at night became effective about a year ago--since that time we've received many QSL requests, particularly from DXrs on the east coast. Apparently when conditions are right, we get out quite a way.

It was good hearing from you. Enclosed is a bumper sticker and a coupon good for a free can of Spam Luncheon Meat. Thanks for your interest in WMIX.

Sincerely,

Tom Sheldon
